

Satellite radio has been a godsend as I can receive uninterrupted programming while traveling throughout the US while at the same time not having commercials jammed down my throat. It would be of great value to receive weather and news in addition to my current satellite lineup as many users like myself travel across the US. This addition, in light of todays current political world situation, and crazy weather patterns across the US would be a great way for Americans to stay informed and safe. I pay for the service and subscribers should determine what the programming should be. Please reject NAB's petition 04-160. Thank you, The Millers
